ICM Poll for The Guardian

Fieldwork dates: 9-11th May 2014

Interview Method: Telephone.

Population effectively sampled: All adults aged 18+

Sampling Method, RDD: Within each government office region, a random sample of telephone numbers was drawn from the entire BT database of domestic telephone numbers. Each number so selected had its last digit randomised so as to provide a sample including both listed and unlisted numbers. 850 interviews were conducted on land-lines.

Sampling Method, Random RDD: A random sample of mobile telephone numbers was generated in proportion to network provider market share. As with the landline process, seed telephone numbers are used to create the mobile RDD sample by randomising the last N digits of the seed number. A total of 150 interviews were conducted with people on their mobile phone.

Sample size: 1,000

Data weighting: Data were weighted to the profile of all adults aged 18+ (including non telephone owning households). Data were weighted by sex, age, social class, household tenure, work status and region. Targets for the weighted data were derived from the National Readership survey, a random probability survey comprising 36,000 random face-to-face interviews conducted annually.

The data were further weighted by declared votes in the 2010 general election. The weighting scheme is designed as follows:

Weighting by past votes
1. Respondents are asked whether they voted in the last general election and if they did, which party they voted for.

2. The sample is weighted by demographics (age, sex, tenure etc). However, after such weighting the declared past votes may not match, exactly, the results of the

last election. Partly this is because demographics (by which ICM control the sample) are relatively poorly correlated with vote behaviour. Nevertheless past vote weighting has to be used with caution as some people genuinely forget how they voted. We cannot simply weight the data to the actual results last time.

3. ICM takes the declared past votes on any new poll and adds it to the 25 or so most recent ICM polls containing the same question. The average of these polls is used in the past vote weighting scheme.

4. ICM compares the declared past votes derived in 3) above to the actual result of the last general election and gives a weight of 80% to the results of the last election and 20% to the average of the most recent polls, thereby assuming that most of the difference can be attributed to political imbalance in the sample and to faulty recall.

Weighting for turnout
1. ICM ask respondents to say how likely it is that they will go and vote in a new general election using a ten points scale where 10 means they would be absolutely certain to vote and 1 means they would be certain not to vote.

2. We then weight people by their anticipated turnout. If someone is 10/10 certain to vote, they are given a weight of 1.0. If someone is 9/10 certain to vote they are given a weight of 0.9 etc. People who tell us they are likely to vote in the next General Election but did not vote in the last, are further down-weighted. If someone says they are 10/10 certain to vote but did not vote in 2010, they are given a weight of 0.5. If they say 9/10 certainty, the weight becomes 0.45 etc.

Voting intentions: ICM derives vote intentions from 2 questions.

First of all respondents are asked how likely it is that they would be to go and vote in a new election. Those who say they will vote are asked to say which party they would support in a new election. Respondents are then asked whether they voted in 2010 and which party they voted for in that election. The vote figures shown in the table are calculated after ICM has excluded those who say they will not vote, refuse to answer the question or don't know who they would vote for. The figures are adjusted for turnout calculated accordingly to their stated intentions to vote.

In a further step, ICM add 50% of those who refuse to answer the vote intention question or say they don't know to the party they voted for in 2010.

The analysis by vote intention shown on each table is taken from table 1, ie before adjusting for refusers and don't knows.

European voting intentions
This section was past vote weighted to Westminster 2010 election targets in order to ensure political balance within the sample. The turnout weighting scheme as described above was also applied, but in line with projected turnout for the European elections. No adjustment procedure was applied, which we believe to be inappropriate for the European elections, based on previous experience.

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .

Table 5
Q.1 Some people have said they would not vote in a new election to the EUROPEAN PARLIAMENT, while others have said they would vote. How certain is
it that you would actually vote in a European Parliament election? On a 10-point scale if 10 would mean you would be absolutely certain to vote and
1 would mean you would be certain not to vote, how likely is it that you would vote in that election if it were held tomorrow?
Base: All respondents

Clear thinking in a complex world

Opinion Poll
CATI Fieldwork : 9th-11th May 2014

Table 7
Data derived from:-
Q.1 Some people have said they would not vote in a new election to the EUROPEAN PARLIAMENT, while others have said they would vote. How certain is
it that you would actually vote in a European Parliament election? On a 10-point scale if 10 would mean you would be absolutely certain to vote and
1 would mean you would be certain not to vote, how likely is it that you would vote in that election if it were held tomorrow?
Q.2 The Conservatives, Labour, Liberal Democrats, UKIP, Green, (Scotland only: the SNP, Wales only: Plaid Cymru) and other parties would fight a new election to the
European Parliament in your area. If there were a European Election held tomorrow, which party do you think you would vote for?
Data excludes those who definitely will not vote (19%), don't know who they would vote for (25%) or refuse to answer (6%)
THIS TABLE DOES NOT INCLUDE ADJUSTMENT FOR DON'T KNOW/REFUSERS
